To Whom It May Concern:

Howitt Construction (Howitt) subcontracted two projects in the 2014 construction season to Western Tank & Lining (WTL). Both projects were Class II landfill cells; one for Secure Energy at their South Grande Prairie, AB location, and one for BFI at their Paintearth Resource and Recovery Center near Coronation, AB.

The Secure Energy project consisted of the supply and install of 665 m<sup>2</sup> of GCL, 38 365 m<sup>2</sup> of LCRS Geocomposite, and 38 365 m<sup>2</sup> of 60 mil HDPE double sided textured Geomembrane. The project experienced very diverse and difficult weather patterns during the installation, but with innovative solutions provided by WTL, the project was successfully completed.

The BFI project consisted of the supply of 49 000 m<sup>2</sup> of 60 mil HDPE double sided textured Geomembrane, and 48 000 m<sup>2</sup> of LCRS Geocomposite. Due to circumstances beyond Howitt and WTL control, installation by WTL of this material has been postponed until 2015.

The 2014 construction season has created a highly valued partnership between Howitt and WTL. We can always count on WTL to address our concerns and needs in a timely and professional manner.

While there are many choices in the market for geosynthetic supply and installation vendors, we at Howitt strongly recommend considering Western Tank & Lining if you are interested in a long term approach and professional service.

Sincerely,

A handwritten signature in black ink, appearing to read "Tyler Howitt", is written over a faint, larger version of the signature.
